

# Plugin Development

Ascentius maintains a few open-source plugins. These are mostly ports and forks. Some of these are made available through our semi-internal Forgejo Instance, while others may be hosted on BitBucket, GitHub, or GitLab. The discretion is left up to the maintainer of the plugin. Please note, not all of our plugins are open-source, nor do we fork every plugin we utilize. As such, not all plugins in production will not be listed.

## Forgejo

URL: <https://git.flagcourier.dev/>

Hosted by FlagCourier for personal use, and made available to Ascentius for hosting or mirroring code. Access is free, but an account is required in order to contribute.

## Account Creation

Ping @FlagCourier on Discord to get set up.

## Current Projects

- RankUp3 - [GPL v3] A Life-Support Fork of okx-code's Rankup 3.14.4
- TeleBack - [MIT] A reverse engineered port of 'Teleport Back' by Omel; provides a simple /back command (without the bloat of EssentialsX or CMI)
- WeightWatchers - [AGPL v3] An RPG Weight System; Work-in-Progress
